Restriction is required under 35USC 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1:

Group I, claims 1-3, drawn to a method of increasing the concentration of a gas;

Group II, claims 4 and 6, drawn to a container;

Group III, claim 7, drawn to a shipping or transportation container;

Group IV, claim 8, drawn to a method of storing a respiring biological material

Group V, claims 9 and 10, drawn to a module;

Group VI, claims 11-12, drawn to an assembly for storing biological material;

Group VII, claim 13, drawn to a method of storing a respiring biological material;

Group VIII, claims 17-27, drawn to a metal shipping container.

The technical feature linking the inventions is the ACM (i.e., atmosphere control member), which does not provide a contribution over the prior art, as evidenced by DeMoor ('293), Antoon ('032), Nagata ('847), Antoon ('768), Clarke et al ('032), Anderson ('875) and Rumberger ('759), which teach that the art taken as a whole is replete with examples of ACM's (and the fact that there can be one or more ACM's of the same type or different). Therefore, the technical feature is not a special technical feature and the claims are restrictable under 371 practice.

In accordance with 37CFR 1.499, applicant is required, in response to this Office action, to elect a single invention to which the claims must be restricted.
